

# Evidências das requisições do Serviço Web SOAP.Demo

## 1: Serviço: **AddInteger** (Adds two integers and returns the result.)

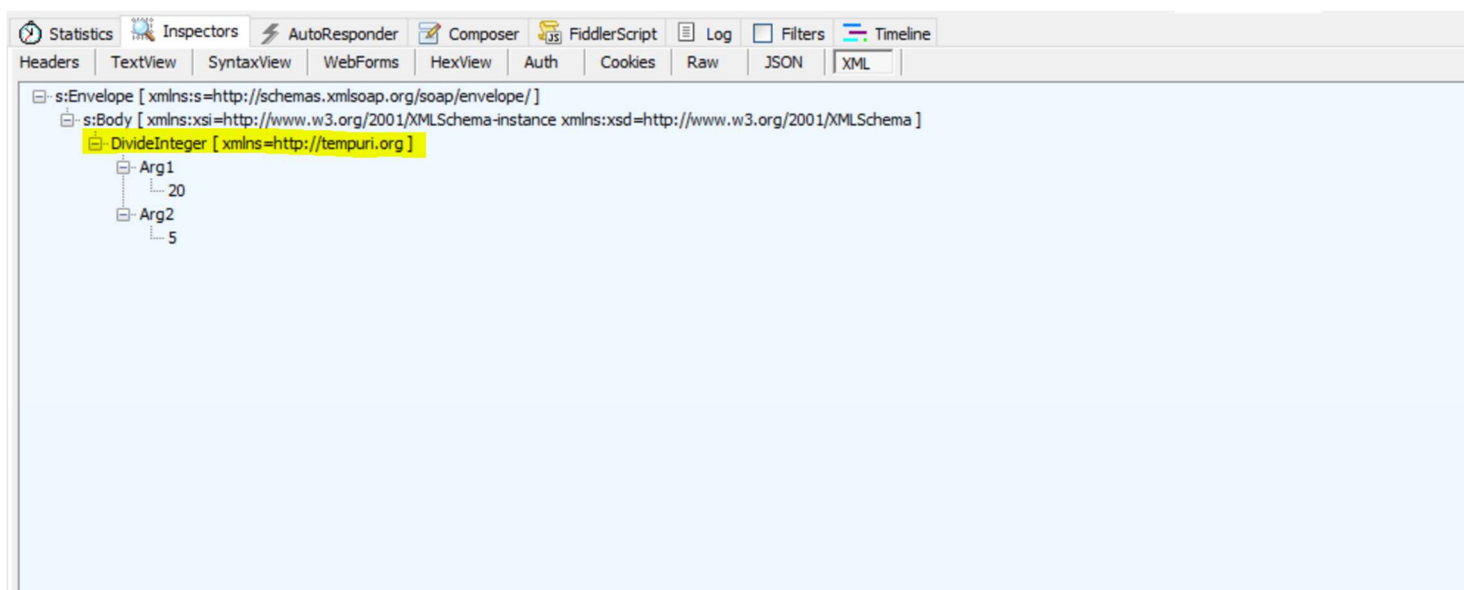

The top screenshot shows the XML body of a SOAP request in Fiddler's Inspectors pane. The root element is `s:Envelope` with namespace `http://schemas.xmlsoap.org/soap/envelope/`. It contains a `s:Body` element with namespace `http://www.w3.org/2001/XMLSchema-instance` and `xmlns:xsd=http://www.w3.org/2001/XMLSchema`. Inside the body is the `AddInteger` operation from `http://tempuri.org`. It has two arguments: `Arg1` with value 5 and `Arg2` with value 5.

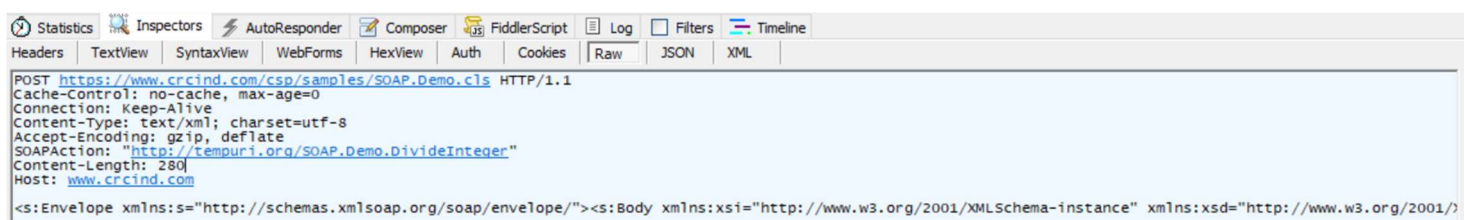

The bottom screenshot shows the raw HTTP request in Fiddler's Raw pane. It is a POST request to `https://www.crcind.com/csp/samples/SOAP.Demo.cls` with HTTP/1.1. Headers include `Cache-Control: no-cache, max-age=0`, `Connection: Keep-Alive`, `Content-Type: text/xml; charset=utf-8`, `Accept-Encoding: gzip, deflate`, `SOAPAction: "http://tempuri.org/SOAP.Demo.AddInteger"`, `Content-Length: 273`, and `Host: www.crcind.com`. The body is an XML document (partially visible) with the same structure as the top screenshot.

## 2: Serviço: **AddInteger** (Divide two integers and returns the result.)

The top screenshot shows the XML body of a SOAP request in Fiddler's Inspectors pane. The root element is `s:Envelope` with namespace `http://schemas.xmlsoap.org/soap/envelope/`. It contains a `s:Body` element with namespace `http://www.w3.org/2001/XMLSchema-instance` and `xmlns:xsd=http://www.w3.org/2001/XMLSchema`. Inside the body is the `DivideInteger` operation from `http://tempuri.org`. It has two arguments: `Arg1` with value 20 and `Arg2` with value 5.

The bottom screenshot shows the raw HTTP request in Fiddler's Raw pane. It is a POST request to `https://www.crcind.com/csp/samples/SOAP.Demo.cls` with HTTP/1.1. Headers include `Cache-Control: no-cache, max-age=0`, `Connection: Keep-Alive`, `Content-Type: text/xml; charset=utf-8`, `Accept-Encoding: gzip, deflate`, `SOAPAction: "http://tempuri.org/SOAP.Demo.DivideInteger"`, `Content-Length: 280`, and `Host: www.crcind.com`. The body is an XML document (partially visible) with the same structure as the top screenshot.

### 3: Serviço: **FindPerson** (Returns data about the person in the database with object ID of id.)
